

Problem

A subarray is ascending if every element is strictly greater than the previous element.

Return the maximum possible sum among all ascending subarrays. Complete the function `maxAscendingSum` that takes the following parameter: `int arr[n]`: an array of positive integers. Returns `int`: the maximum ascending subarray sum.

Input Format

Submissions

The first line contains an integer `n`, the number of elements in the array. The second line contains `n` space-separated integers.

Constraints

$1 \leq n \leq 10^5$ $1 \leq arr[i] \leq 10^4$

Leaderboard

Output Format

Print a single integer representing the maximum ascending subarray sum.

Sample Input 0

5
10 20 30 40 50

Sample Output 0

150

```
1 # Enter your code here. Read input from STDIN.
2 n=int(input())
3 arr=list(map(int,input().split()))
4 curr_max=arr[0]
5 total_max=arr[0]
6 for i in range(1,n):
7     if arr[i]>arr[i-1]:
8         curr_max=max(curr_max,curr_max+arr[i])
9         total_max=max(curr_max,total_max)
10    else:
11        curr_max=arr[i]
12    print(total_max)
13
```
